

Phase 4: Process Automation (Admin)

Update Records

*Label: Update Records *API Name: Update_Records

Description:

*How to Find Records to Update and Set Their Values

- ☒ Use the student record that triggered the flow
- ☐ Update records related to the student record that triggered the flow
- ☐ Use the ID and all field values from a record or record collection
- ☐ Specify conditions to identify records, and set fields individually

Because this flow runs before a record is saved, you can only update the record that triggered the flow to run. To update other records, configure the trigger to run the flow after the record is saved.
